

Problem 5.2

❖ 3-bit encoder with Sampling Time = 0.25sec:

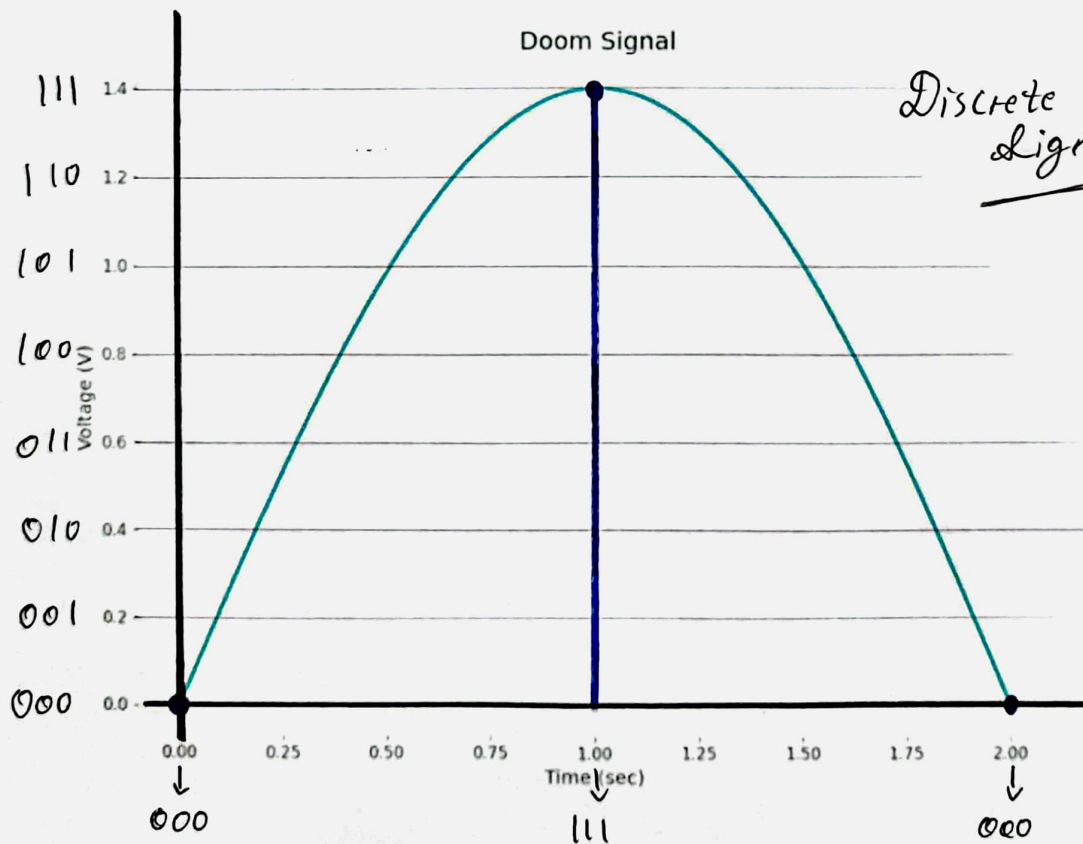

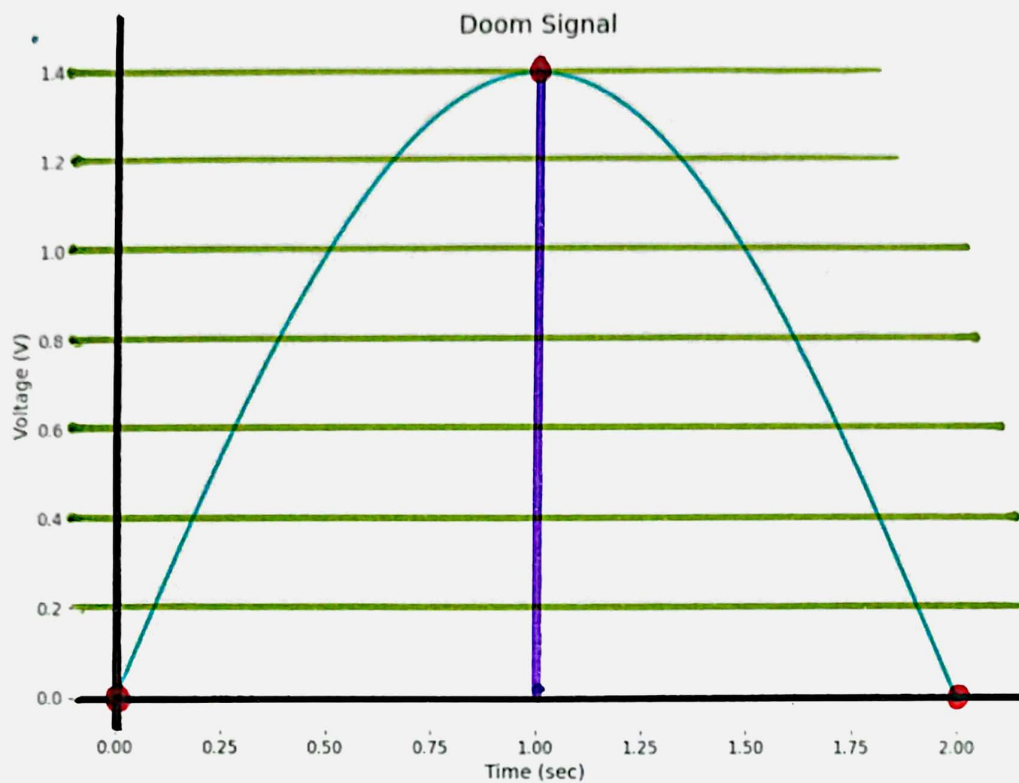

Bit Sequence: 000 011 101 110 111 110 101 011 000

❖ 3-bit encoder with Sampling Time = 0.5sec:

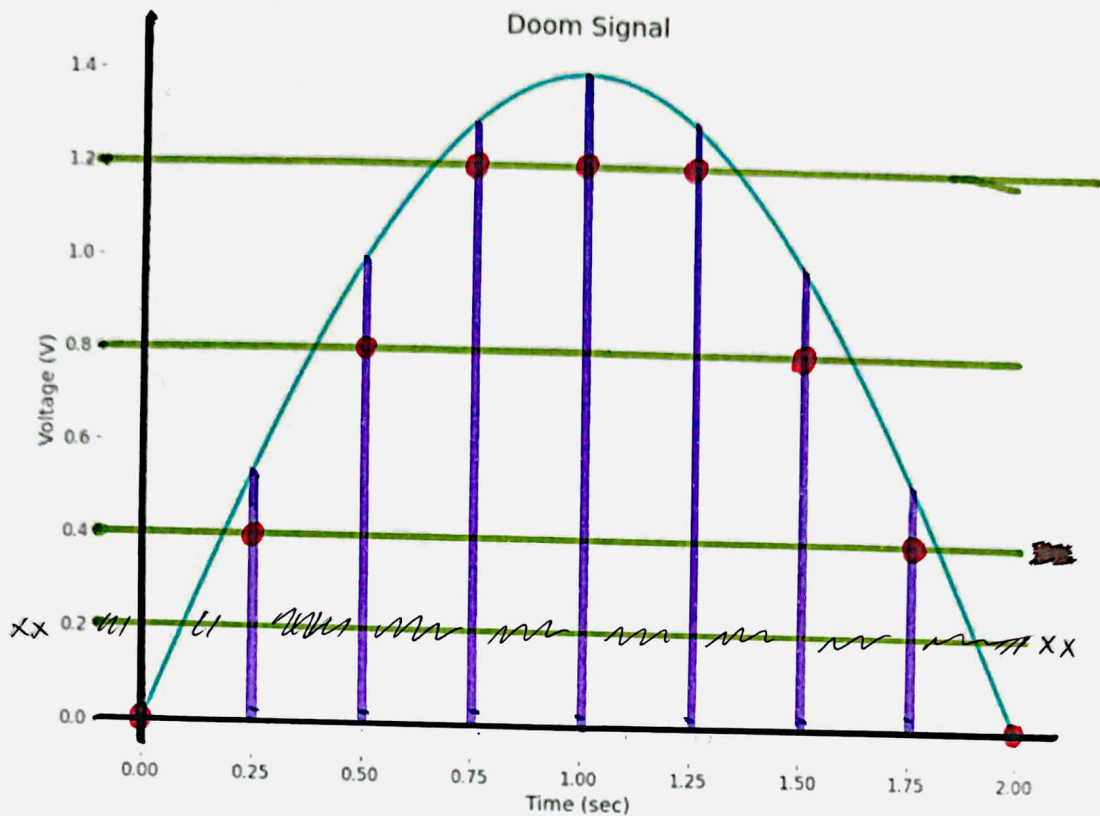

Bit Sequence: 000 101 111 101 000

❖ 3-bit encoder with Sampling Time = 1 sec:

Bit Sequence: 000111000

❖ 2-bit encoder with Sampling Time = 0.25sec:

Bit Sequence: 000101111100100

❖ Conclusion: (*) As Sample Time increases, accuracy decreases because some details are Lost.

(*) As No. of bits decrease, accuracy decreases

(*) For best Result, increase no. of bits & decrease sampling time
